29	30 Steamed Chicken with Shacha Sauce Eggplant Kiwi					

Cataracts occur when there is a buildup of protein in the lens that makes it cloudy. It is likely developed in older adults. Oxidative stress appears to play a significant role in the development of cataracts. Studies have reported an inverse relationship between cataracts and dietary intakes of vitamin C, vitamin E, and carotenoids; taking supplements or eating fruits and vegetables rich in these antioxidant nutrients seems to slow the progression or reduce the risk of developing cataracts. Some fresh vegetables and fruits such as orange and carrot are rich in vitamin C and carotenoids.
